flow

solid surface collection by GF

wall-mounted washbasin

description

GF nv, a company specializing in solid surface productions, consulted young designer Bram Bollen. As a freelance designer, Bram earned his stripes by designing for Belgian companies such as Tribù, Marutti and Marlux and by creating design concepts and contemporary furniture with his creative studio Plan B.

For this specific collection, he designed an organically shaped wall-mounted washbasin in Kerrock, Vink nv's solid surface. The very thin yet solid shape of the basin is very controversial with regard to the material's characteristics and its competitive counterparts.

In a second phase, GF developed a furnished closet with drawers, combining a stand-alone washbasin and storage solution into a freestanding unit.

With its bent drawer fronts, it provides a perfect support base and seamlessly follows the design of the washbasin's natural flowing lines.

Just like the shell, all drawer fronts have been finished in the same solid surface material. The inside is finished off with top-of-the-line drawer systems.

This concept is available as a modular system in a one-, two- or three-drawer set-up.

The one- and two-drawer set-ups can be hung by the wall. In a complete triple drawer edition it can stand by itself.

Both items are available in white Kerrock and can be used with a built-on or wall-mounted water tap.

This creation also illustrates the high technical production skills and potential of the young company GF solids.
